Frontend / Full-Stack Engineer with 8+ years shipping high-performance React and Node apps for technical users, including complex data editors and real-time products. Focused on performance at scale, reusable frontend infrastructure, polished UX, and delivering robust features with my backend and product partners.

WORK & EDUCATION

Chief Technology Officer / Cofounder @ Advize

August 2024 - Present

- Engineer a React/TypeScript/Node video/data platform serving thousands of users. Optimize data, performance, and reliability while scaling content to 11k+ videos. ~\$20/mo infrastructure overhead.
- Partner with 10+ programs (ASU, UCLA) to deliver features end-to-end, translating stakeholder needs into shippable UX with detailed analytics. Students report +40% average increase in career understanding.
- Build plug-and-play assignment tools that enable resource-constrained educators to bring career learning to students at scale and explore graded outcome data (quantitative and qualitative).

Full-Stack Software Engineer @ Various Clients

January 2022 - Ongoing

- Developed a distributed, data-heavy React/Remotion/Node video rendering system on GCP that generates 2-hour+ videos in under 12 minutes, faster than Remotion's official Lambda-based solution.
- Built agentic screenplay-proofreading product. Users view/accept/reject/modify hundreds of AI-generated suggestions in an editor, with real-time cross-app syncing, low-latency UIs and AI cost optimizations.
- Collaborate with FTEs on a range of projects; Stripe integrations, real-time data streams, end-to-end UI development, BE integrations, agentic systems, major refactors, technical data visualizations, and more.

Senior Software Engineer / Team Dev Lead @ Yum! Brands

December 2019 - January 2022

- Supported ~8-member team via roadmap planning, refining tickets, deployments, improving DX, designing scalable + reusable FE infrastructure/patterns, addressing feedback and one-on-one support.
- Orchestrated a centralized RBAC system for admins/franchises to manage access across microservices.
- Led frontend modernization of a legacy admin app with zero downtime, then developed a flexible, performant form system to define complex food products, pricing, store schedules, and POS integrations.

Frontend Web Developer @ Summit (f.k.a. ServerCentral)

January 2018 - December 2019

- Built React-based tools for internal technical teams to manage cloud infrastructure via data-heavy interfaces with complex workflows and high reliability needs, e.g. racking a new server in a datacenter.
- Coordinated with PM, UX and BE engineer to deliver an urgent client dashboard analyzing load testing metrics by stubbing realistic data and iterating UI/UX quickly while backend APIs came online.
- Increased warehouse employee productivity and reduced errors by designing and building a React Native tablet app that made it easy to scan and document destroyed hard drives for compliance purposes.

Associate / Analyst @ Brownson, Rehms & Foxworth

June 2015 - December 2017

B.A. Economics and B.A. German @ University of Michigan, Ann Arbor

September 2011 - May 2015

SKILLS & TECH

Frontend: React, TypeScript, Tailwind, Component Systems (Mantine, Radix UI), Accessibility, React Native, Responsive Design, Real-time Data (WebSockets), Redux/Zustand, Next.js, Data Visualization/Charts, React Query, Data Tables, Performance Optimization (Profiling, Virtualization, Memoization), Form Systems.

Backend/Data: Node.js, NoSQL, Postgres/MySQL, Caching, Puppeteer, API Design, Auth, Audio/Video.

AI/Cloud: Agentic Systems, LLM Orchestration, Token/Latency Optimization, GCP, Firebase, AWS, IAM.

System Design: Distributed Systems, Microservices, Scalability, Cost/Performance Optimization.

Product & Quality: UX Design, Rapid Prototyping, Technical Writing, Roadmapping, Testing (Jest, Playwright).
